

GCC Onboarding Case Competition – Fall 2023

Case Context:

Bridges for Enterprise is an organization that empowers social entrepreneurs to scale their ventures and expand their impact globally. The company in this case is a real client of Bridges for Enterprise seeking tangible advice from consultants. Gamecock Consulting Club has successfully worked on numerous Bridges for Enterprise projects in past semesters and would like to continue this relationship in a positive manner.

The company represented in this case is a real startup looking for a solution to their business problem. Outside research of the company is necessary in order to tackle this case sufficiently and effectively. See [here](#) for the website of the company itself and see [here](#) for background on Bridges for Enterprise.

Expectations and Objectives:

Case Competition Objectives:

- Provide participants with a scenario that addresses complex issues faced by international firms
- Improve critical-thinking skills such as issue dispositioning, solution ideation & development, and the communication of results
- Practice teamwork in a time sensitive scenario with concrete end products which will provide participants with tangible skills for future careers and case competitions
- Have fun and think creatively!

Expectations:

- Create a PowerPoint presentation outlining your proposed solution no longer than 15 slides (not including appendix slides) or 20 minutes of talking time, followed by 10 minutes of Q&A
- Your presentation should include: a timeline, risks/mitigations, and brief cost considerations

- All PowerPoints should be emailed to lmangano@email.sc.edu in the form of a PDF or PPT by 11:59PM on Wednesday, November 15th, 2023
- Up to 3 clarifying questions per team may be submitted to lmangano@email.sc.edu by 11:59PM on Sunday, November 12th, 2023 - Relevant questions will be answered via email to all teams by 5:00PM on Monday, November 13th, 2023

InstaHEAL and Social Entrepreneurship

Social Entrepreneurship:

Social entrepreneurship applies the principles and guidance used by start-up founders and entrepreneurs to a business that directly generates social change or impacts a social cause. A social entrepreneur is motivated primarily by a desire to alleviate some kind of systemic social or cultural problem. The key operational mechanism of Social Entrepreneurs (SEs) is to reduce the cost, collaboration, and engagement with multiple stakeholders from different platforms.

Telehealth

Telehealth includes a broad array of services that facilitate the delivery of medical consultation, patient education, health information services, and other related services via the use of digital technologies. Some examples of technologies utilized in telehealth include video conferencing, health apps, mobile health, and other methods that promote patient monitoring from remote locations. It is noteworthy that telehealth allows patients in rural settings to gain access to medical providers at larger facilities in major cities/metros. These services can be used to address issues associated with physician shortages and access to specialty care in rural and remote locations. A recent study suggested that 95% of patients who received medical consultation via telehealth were highly satisfied with the quality of care, ease of access, timeliness, and ability to integrate technology in their plan of care.

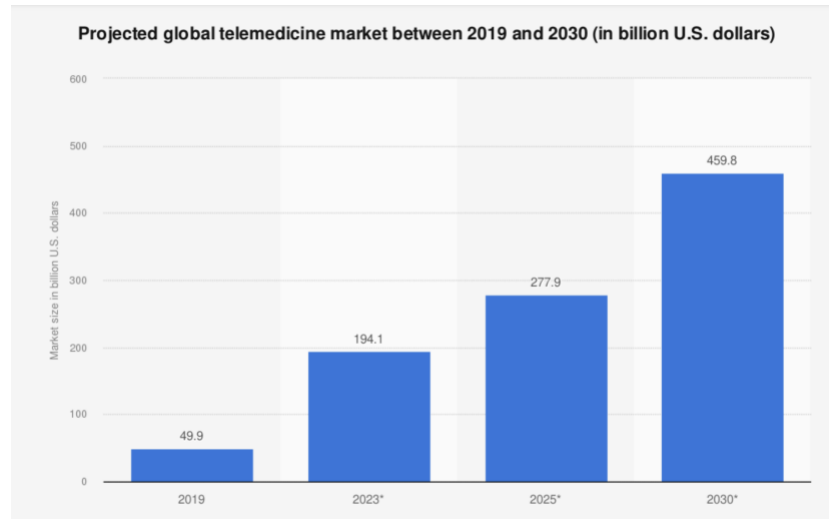

Figure 1: Projection of Global Telemedicine Market to 2030 (Statista, 2023)

Telehealth can serve as an effective method for providing care especially when medical professionals are able to monitor a patients' condition from remote locations. This can lead to reductions in hospital admissions and even deaths in some cases. Evidence suggests that there is a rise in the demand for telehealth services after COVID-19 hit.

Formation of InstaHEAL:

InstaHEAL is a social enterprise in the field of healthcare. The core idea behind setting up this enterprise is to support citizens in rural and remote areas with the best possible care at their homes in the field of mental healthcare.

Across the globe, there is an alarming gap between the need and the availability of specialist providers for mental healthcare. Most of these providers are predominantly in major cities and metros with less focus on rural and remote areas. This has led to the creation of the InstaHEAL enterprise in hopes of removing this gap and ensuring that every citizen suffering with mental health is receiving the same kind of care, regardless of their geography.

An excellent technology application has been designed for this purpose, which will function as a bridge between the end users (mental health patients) and the specialist doctors such as psychiatrists, psychologists, and therapists. Through this technological bridge, the patients in rural areas can be integrated into the network of specialist doctors who can diagnose the patients and supply treatment virtually.

InstaHEAL technology has been piloted in a few clinics in Illinois, USA and has received excellent recognition. The need for this kind of solution has increased as larger numbers of patients need to be treated since COVID-19 times.

InstaHEAL uses Artificial Intelligence for speedy diagnosis, supplying the right treatment, and medication planning. The technology has been proven and has the ability to handle a larger number of users across various states in the USA and in other countries.

As the technology is experiencing good bandwidth in terms of reaching out to the last mile citizen, we are envisioning the set-up of kiosks at major centers in rural and remote areas for patients who are suffering from mental health ailments. Kiosks will provide patients in remote areas with connectivity to the network of specialist doctors, where they can select the best specialist and submit their case for diagnosis.

After serious discussions, it has been decided to provide the service to identified remote areas in other states across the USA and in other countries. InstaHEAL technology can be implemented in hospitals of all sizes, and specialist doctors with their own practices can also use the technology for providing services to their end users.

The Challenge:

In order to expand to other states and countries, it is imperative that we confront the challenges commonly met by most startup founders. The main areas of concern are sales and marketing, resources, branding and promotion, and finances. InstaHEAL has approached a few different investors for the purpose of funding, and the interactions are highly promising.

InstaHEAL is also putting up all efforts for the right marketing promotions to create awareness. Pricing is also a major factor as the market becomes more competitive. All these components are important pieces of market entry into new regions.

Our goal is to produce an action plan for the two major portions of the expansion plan: the marketing strategy and the pricing. Please formulate a robust plan that addresses these core issues and suggest a plan to implement your solution.

Questions:

1. What is your understanding of the Telehealth environment and how InstaHEAL fits into it?
2. With Telehealth market on the rise, how can InstaHEAL differentiate itself from competitors?
3. What are some implications of the kiosks that have not been considered in this case, and how would you mitigate them?
4. What recommendation would you establish in InstaHEAL's marketing strategy?
5. What approach would you make in establishing a strategic pricing strategy? Why will your pricing strategy create a unique competitive advantage for InstaHEAL against its competitors?
6. What is the order of action, and what does the estimated timeline look like?
7. What are the largest risks of your strategy and how you would mitigate them?
8. What are the key performance indicators you would use to measure the success of your solution?
